Grand Island Nebraska

Environmental Products

Gentlemen

I have been in the trucking business for fifty years. I have always been one to change my oil at 12,000 mile intervals but after installing your new Enviro-Kleen by pass oil filter I have gone 60,000 mile intervals for the past year using Del Vac 1300.

After changing to Primrose 100% synthetic oil, In combination with the Enviro-Kleen by pass oil filter. I now only have to change my oil at 120,000 mile intervals. Only changing the by pass filter element at 30,000 and again at 90,000 miles. The full flow filter and by pass element at 60,000 miles and all filters and oil at 120,000.

my engine is a 425 HP 60 series Detroit with 1,200,000 miles. When using Del Vac 1300 with the by pass filter I was changing oil every 60,000 miles A savings of approximately \$1160.00 in oil changes only per. year. This does not take oil consumption into account.

I was changing oil 10 times a year at \$140.00 per oil change. The Primrose Synthetic oil has cut my oil consumption in half, and in combination with the by pass oil filter I am saving approximately \$1100.00 per year in oil change only cost. Plus I have added advantage of longer engine life using a synthetic oil.

I am very impressed with how Filters and oil continue to get cleaner with each change as the engine gets cleaner. The oil analysis after 60,000 is still very impressive. This is the first filter I have ever used, the more miles you run the oil the better the test. Thank you for introducing me to your Enviro-Kleen oil filter and Primrose oil products.

Sincerely
Jack Millard
