To Whom It May Concern:

I have been using B-660 Enviroblend in all my Environmentally sensitive equipment on the golf course for a number of years. It has worked very well compared to other vegetable oil based hydraulic fluids. Having a synthetic additive package allows us to retain the equipment manufacturers fluid change intervals. The other fluids needed to be changed yearly because they would break down. Though not inexpensive, B-660 is cost effective in that change out intervals are much longer. We have not seen any increase in wear as compared to petroleum based hydraulic fluids in that equipment either. Keep up the good work!
