Danny Alexander
Primrose Oil Co

I would like to report to you the results on our compressor after switching to the Primrose 788 Syn-O-Gen Synthetic THC Fluid..

We were running a Sullair 1350/350 compressor with a Mobil fluid since it was new and the temperature always ran at the maximum 265 to 268 degrees. We drained the complete system and changed all filters, then added the 788 Syn-O-Gen fluid to the system. We have ran the compressor in the field with the air temperature at or above 100 degrees, and the compressor temperature has never gone over 250 degrees. This is the results you said we would see on our first visit, and Basin Tool thanks you for your help.

Thank you,

James Stringfield
Basin Tool/District Manager
