

Jeff,

I was writing to you today to let you know how pleased we are with Primrose 327 grease.

When we began doing business and purchasing 327 we were on average replacing steer axle wheel bearings on our lifts every 3 months due to premature failure. Since switching over to 327 we have not had a bearing failure due to wear. In fact we haven't replaced a wheel bearing on a lift in the past 2 years.

We have also noticed the drop off in u joint and steering component failures. We went from continually having u joint issues to none. I can't honestly tell you the last u joint we have replaced due to wear or failure.

We also were able to extend our service intervals by 3000 miles and still notice how much 327 grease comes out of the components with very little effort. It doesn't go away!

327 is one of the many things Primrose has helped our business with. Injector failures are virtually nonexistent due to your summer blend fuel treatment. Gel issues are very rare due to the winter blend we treat our tanks with.

By far Primrose has cut our cost and helped us maintain one of the top fleets in our area! Keep up the good work!

Thank You!
